

Virtual MDT for Breast OAFU patients

A virtual MDT (VMDT) will be conducted for all patients who are almost 5yrs post treatment and are due for discharge with the aim of agreeing suitability for discharge and to review treatment plans for any patients prescribed anti endocrine treatment. Patients who have a medication switch planned during the first 5 years may also be discussed. The VMDT will take place on the 1st Friday afternoon in the month. The current plan is to run this VMDT once a month but is subject to change based on demand.

The VMDT will require the presence of an Oncologist (as per agreed rota) an Advanced Nurse Practitioner (ANP) Breast Care Nurse (BCN) and Macmillan Breast Care Navigator. The ANP/BCN will present the case summary and the Navigator will document the outcome on to iPortal. The patient and GP will be advised of the VMDT outcome by the ANP/BCN by letter.

Task	Responsibility
Identification of patients from RMS completing 5 years of follow-up and all added to the VMDT list for discussion	Navigator
All patients prescribed anti-endocrine treatment to be phoned approximately 2 weeks prior to VMDT meeting to discuss current treatment and tolerance and to make them aware of the pending discussion. Outcome documented on list	Navigator
List for VMDT discussion to be shared with the ANPs, BCNs, oncologists a week prior to the VMDT and send meeting invite if TEAMS	Navigator
Preparation of case summary/proforma for VMDT discussion	Navigator
Case presentation of each patient in VMDT	ANP/BCN
Discussion of case and treatment plan to be discussed between ANP/BCN and oncologist and outcome agreed.	ANP/BCN, Oncologist & Navigator
Documentation of VMDT outcome on iPortal	Navigator
VMDT outcome form to be scanned and uploaded on to iPortal	Navigator
Patient and GP to be informed of the VMDT outcome by letter plus phone call if original plan has changed e.g. may need menopausal bloods checking. Request bone density scans if required	ANP/BCN
